WINEMAKING PRACTICES

Yeasts	Enoferm Syrah / Alchemy 4
Fermentation temp	26 - 27 °C
Method	The grapes were gently de-stemmed, retaining as many whole berries as possible, before passing over an additional vibrating table to remove all MOG (matter other than grapes), after which a displacement pump takes the fruit to its fermentation tank. The tanks are then inoculated with a specific commercial yeast strain, this way insuring the development of the perfect flavour profile. Fermentation is done in stainless steel fermenters, and a combination of aerative pump overs and punch down techniques are used to ensure optimal colour, tannin and flavour extraction. Once fermentation is complete the wine is drained off the skins and moved to a holding tank to be barreled down. Malolactic fermentation takes place in the barrels.
Wood Maturation	18 months in barrel, 30% new French and the balance in older barrels
